OTHER DOCUMENTS

(AA) "Heitz/Keysa: "Grundlagen der Technischen Elektrochemie" its relevance is as follows:

This document has been cited in the examination procedure before the German Patent and Trade Mark Office. It is a textbook and relates to technical electrochemistry. The Examiner has stated that this document would disclose in Fig. 5.1 (on page 86) in general the voltage drop between a reference electrode and an anode. Further this document would disclose varying the

distance between and electrode and a reference electrode, i.e. that the voltage at various locations between the anode and the cathode could be measured, in order to obtain the curve shown in Fig. 5.1 for example. The document discloses the kind of the voltage drop fractions between a working electrode and a reference electrode in the electrolyte solution, i.e. for example an ohmic voltage drop. Further this document describes the general technique to record current/voltage diagrams using for example a 13 wt.% chromium steel, further a method to record the electrochemical behavior of a Pt electrode in a 1 N H₂SO₄ solution and the anodic oxidation of oxalic acid in sulfuric acid solution.

Respectfully submitted,
